## Small

**B**attery powered for 400G Ethernet measurements

**E**asy-to-use GUI with 9-inch touchscreen for better operability

## Flexible

**O**ne unit supports multiple standards, including OTN, eCPRI/RoE, Fibre Channel

**O**ptical fiber line measurement in combination with OTDR module

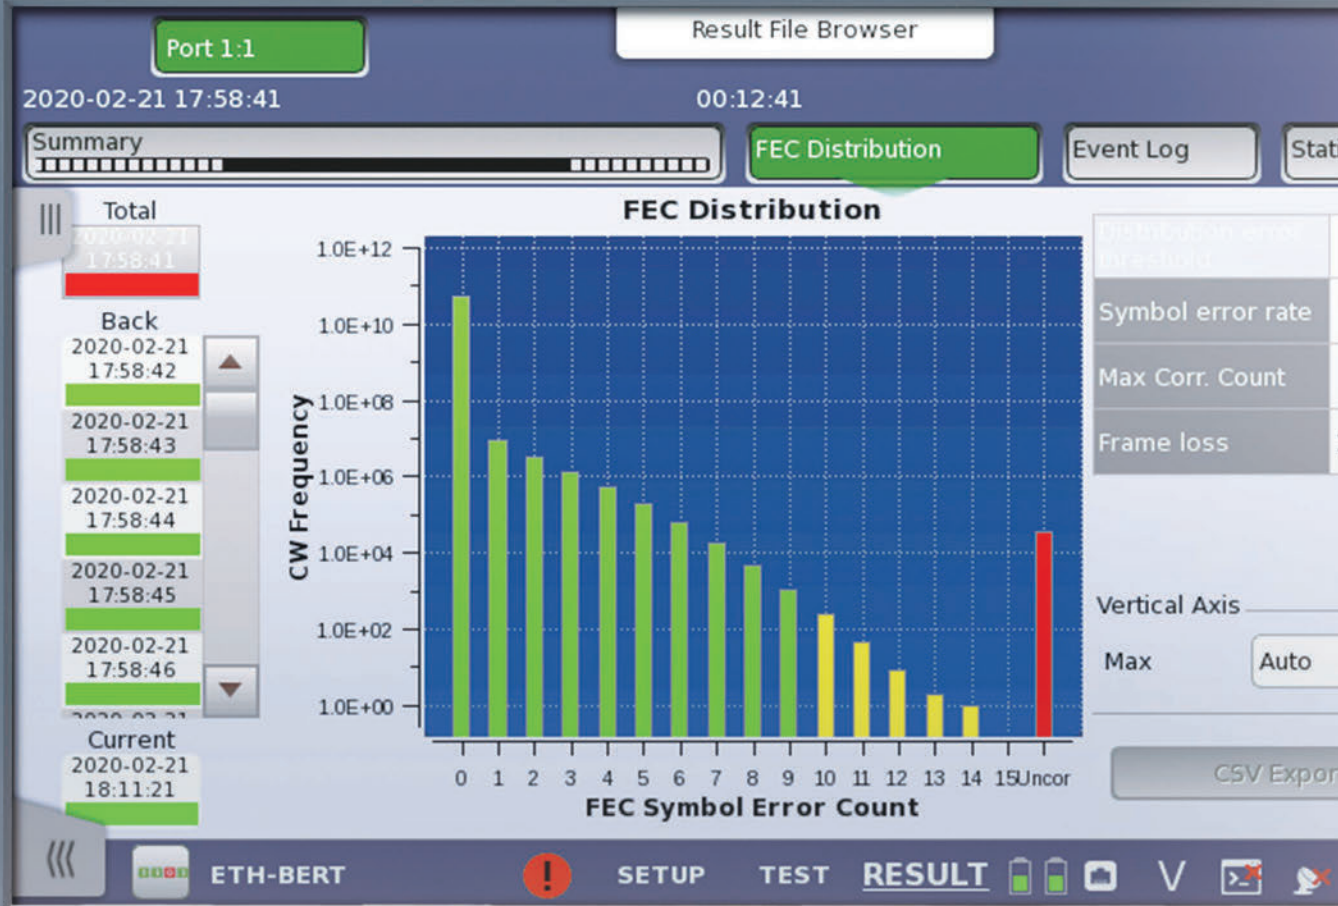

## Powerful

**B**uilt-in 400G Ethernet FEC analysis function

**S**imple optical module check function

**M**ore efficient work with automated-measurement tools supporting one-button tests

## Small ... Compact and Lightweight

With a built-in, large 9-inch touchscreen, the Network Master Pro MT1040A is the ideal instrument for 400G Ethernet tests.

Testing is supported by installing the Activate for 400G Dual/100G Quad Option MT1040A-020 and two measurement modules.

The MT1040A is both AC and battery powered (with more than 1 hour of 400G tests while on battery power).

## Powerful Support for On-site I&M Work

As networks become increasingly advanced, installation and maintenance (I&M) engineers need a good understanding of the technologies supporting metro and mobile networks, data centers, etc., and tester operation. Additionally network commissioning sometimes requires many different measurements, which imposes a heavy load on operators working on-site. With a full range of built-in test functions, the MT1040A helps lighten operators' workloads.

### Easy-to-Use GUI with Large 9-inch Touchscreen

The MT1040A has a wide 9-inch touchscreen built-into the wide B5-size case. At on-site testing with no available AC supply, the battery secures 1 hour (average) of continuous, problem-free 400G interface measurements. The GUI is designed for efficient on-site network I&M evaluation work, and fast troubleshooting if a problem occurs. The intuitive user interface also helps shorten operator training times.

### Flexible Connectivity

WLAN, Bluetooth® and LAN connectivity ensure quick and simple tester access in any situation. While remote operation allows an experienced engineer to assist colleagues in the field.

The Bluetooth® mark and logs are owned by Bluetooth SIG, Inc. and are used by Anritsu under license.

The Network Master supports all types of network I&M.

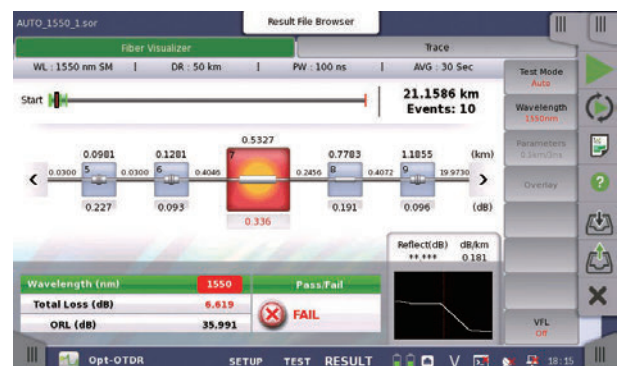

The modular design of the Network Master Pro MT1040A platform makes it easy to support I&M for different network configurations. Furthermore, options for each test function can be selected and added as necessary to match the work schedule, helping cut initial capital costs.

## Ethernet Installation and Troubleshooting

Network operators are introducing new carrier-class technologies, such as VLAN, Q-in-Q, Ethernet OAM, etc., to their Ethernet service menus, increasing test complexity and test time for field technicians.

With connectivity, bandwidth, QoS (Quality of Service), and service-related test functions, the MT1040A is ideal for commissioning and troubleshooting Ethernet networks at speeds up to 400 Gbps.

- BER tests – include Frame Loss and Sequence Error tests
- FEC Analysis
- Automated RFC 2544 tests of Throughput, Frame Loss, Latency or Packet Jitter, Burstability
- Filters – to extract relevant parts of traffic
- Separate pass/fail threshold settings
- Multistream Tx/Rx function (QoS/CoS test)
- Stacked VLAN (Q-in-Q)
- Link Fault Signaling (LFS) Emulation (10 Gbps to 400 Gbps)

## Supports I&M for Various Transport Networks

Networks do not only use Ethernet technology. Consequently, in addition to supporting Ethernet, the MT1040A also supports mobile networks using eCPRI and CPRI, core networks using OTN and SONET/SDH, and various other networks such as fiber channel used by data centers and video streaming services. Adding various protocols also facilitates network I&M.

## Strong Support Ranging from 400 GbE Equipment Tests to Network I&M

Two measurement modules can be installed in the MT1040A by adding MT1040A-020. As a result, both 400G dual port and 100G 4 port measurements are supported. Customized installed options facilitate applications ranging from equipment inspection to network I&M.

### Laboratory Equipment Tests

#### 400G Dual-port Tester

All-in-one, single-screen detailed laboratory network and equipment tests

### Functions, GUI, Automatic Measurement Scenario Sharing

- Laboratory and on-site field tests with minimum advanced training
- Both separate and shared measurement modules

### On-site I&M Tests

#### Compact 400G Tester

Battery operation for on-site tests and tests between two sites

## Mutual Interference Test between Ports

Dual-port measurement comparing the performance between two ports on one screen supports easy interference-free testing.

## Multi User

Maximum four person can use the same MT1040A without restrictions. Each person controls MT1040A from local PC providing effective test tasks.

### 400G Ethernet FEC Analysis

Ethernet equipment interfaces use optical modules. With some exceptions, pass/fail verification of optical modules up to 100G is performed simply by measuring the bit error rate (BER) for a fixed period of repeated sending and receiving of signals to confirm the error-free status. Similarly, network throughput and latency are measured using a BERT.

However, the 400G Ethernet PMD layer is switching to PAM4 and FEC (Forward Error Correction) to correct errors occurring at optical transceivers and networks transmitting extremely fast signals, and to assure both communications quality and lower costs. FEC is a technology for correcting errors within the correctable range, and assures high reliability as well as extended transmission distance.

### MT1040A FEC Symbol Error Measurement

The MT1040A supports both visual monitoring and quantitative measurement of FEC Symbol Errors while communicating using Ethernet Frames. In addition, it supports two types of threshold setting and continuous saving of measurement results at any interval for stability evaluation and analysis of correlations with other events.

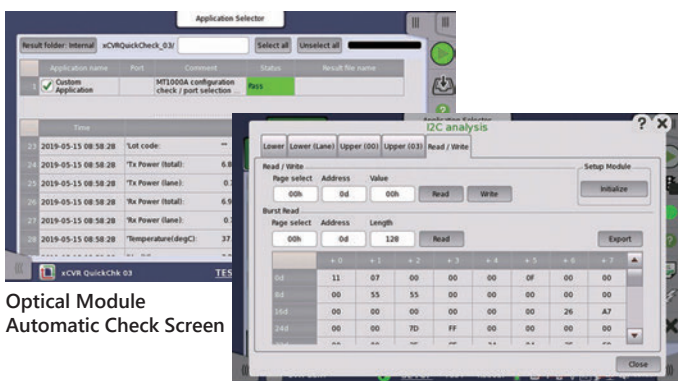

Periodic network monitoring using this function confirms the network load conditions, helping prevent problems.

### Easy Optical Module Tests

The MT1040A includes tools for optimized setting of directly connected optical modules. These tools support easy pass/fail tests of optical modules. Moreover, manual access to the optical module MDIO and I2C functions simplifies optical-module checks.

## 400ZR/OpenZR+ Pluggable Coherent

To cut network-expansion costs, introduction of Pluggable Coherent 400ZR/OpenZR+, which implements a coherent transmission function in the transceiver, is progressing. Since these technologies facilitate introduction of open networks, it is more important than ever for users to pre-evaluate the system and analyze actual field performance. The MT1040A assists stable 400ZR/OpenZR+ operation by comprehensive verification using two fully independent ports and detailed live network analysis by continuously monitoring media-side quality, including OSNR/PMD/SOP, using the transceiver's coherent monitoring function.

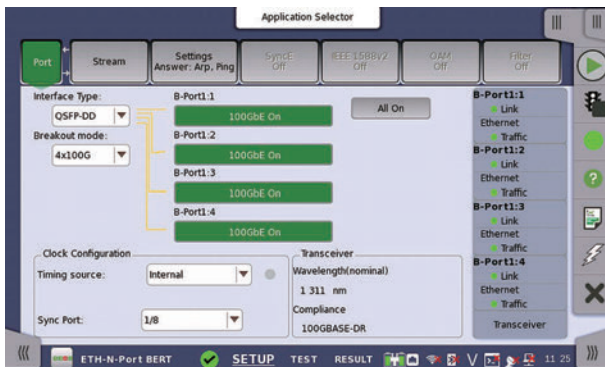

Example of 2-port independent test

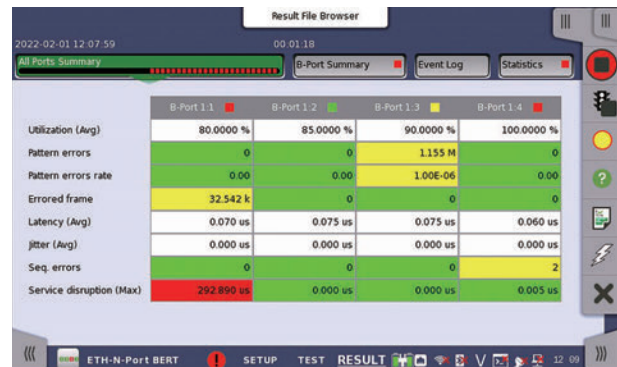

Example of continuous monitoring of media-side quality

## N Port BERT Measurement

MT1040A supports 400GBASE-XDR4/DR4+ and 400GBASE-2FR4 breakout optical modules, which enable device and ical module tests. One MT1040A tests two 400GBASE interfaces simultaneously using two installed 400G modules.

## Easy Connections Anywhere Using SORA (Site Over Remote Access)\*

Using the Site Over Remote Access MX109020A (SORA hereafter) software measuring instruments can be remotely controlled easily anywhere. The SORA cloud-based service allows office users to log-in to an Internet webpage to control the measuring instrument from the office via a smartphone.

## Uploads Measurement Reports to Cloud Storage

Can upload measurement-result reports to cloud storage via SORA Linking with the SEEK tool for automatic scenario creation facilitates automation of related processes such as settings, measurement start, pass/fail evaluation, measurement results reporting, etc. The connection between the tester and storage uses secure SSH or HTTPS.

\* This service can be used in countries and regions where the "Connectivity for WLAN/Bluetooth MT1040A-003" has been approved. For details, contact Anritsu.

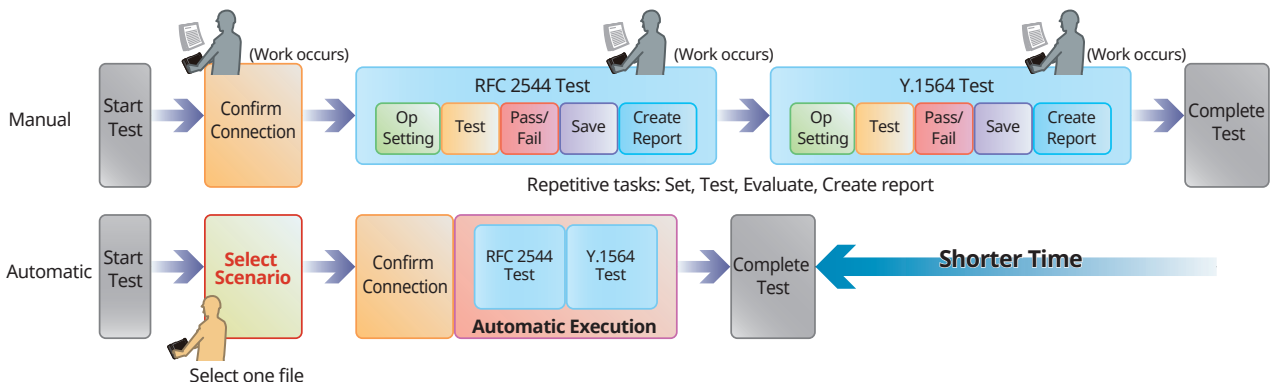

\* To connect using SORA, you must purchase an option license for the main unit as well as a subscription license.

Refer to the MX109020A leaflet and product introduction for more details. You must agree to the service contract before purchasing SORA.

Refer to the service contract at the following URL: <https://www.anritsu.com/en-us/test-measurement/support/downloads/manuals/dwl20059>.

## One Button Testing

The MT1040A has automatic test functions for simple and efficient network commissioning. These MT1040A automated test functions run scenario files created in advance on a PC to perform tests automatically using preset measurement items, procedures, and pass/fail evaluation conditions. Since the scenario also handles report creation, evaluation and results, inexperienced workers can run accurate tests without operation mistakes and re-tests.

## Optical Transceivers Specification

When using any of the MT1040A/MU104014B/MU104015A/MU104011A/MU100011A/MU100010A1 modules for testing optical interfaces, perform the test by installing the optical modules matching the test standards in the QSFP-DD/OSFP/QSFP28/SFP/SFP+/SFP28 slots. The following table lists the modules and supported standards.

## Remote Software Service

The following licenses must be purchased to use the Site Over Remote Access MX109020A.

### Mainframe Option License

Model/Order No.	Name
MT1040A-003*1	Connectivity for WLAN/Bluetooth
MT1040A-011*2	Site Over Remote Access Connect

\*1: WLAN is available for certified countries and regions including USA, Japan and EU countries. Please visit the Anritsu web site for updated information.

\*2: Validity period is unlimited. An open TCP port may be required to allow the MT1040A to be connected from an in-company LAN to MX109020A, depending on the LAN security policy.

### Subscription Option License

Model/Order No.	Name
MX109020A*3, *5, *6, *7	Site Over Remote Access Basic License
MX109020A-TL001*3, *4	Site Over Remote Access 1 Year License
MX109020A-001*5	Site Over Remote Access 8 Units
MX109020A-002*5	Site Over Remote Access Unlimited Units
MX109020A-003*8	Centralized Data Management

\*3: We recommend purchasing a 1-year license in addition to the basic license.

\*4: When extending the usage period, we recommend purchasing in 1-year license periods

\*5: Up to two measuring instruments can be remotely controlled simultaneously with the basic license.

This number can be increased to up to 8 units by purchasing the MX109020A-001 option, and up to 100 units by purchasing the MX109020A-002 option.

\*6: You must agree to the service terms before purchasing SORA.

Refer to the service terms at the following URL: <https://www.anritsu.com/en-us/test-measurement/support/downloads/manuals/dwl20059>

\*7: This product cannot be used in some regions and countries; please read the service terms for more details.

\*8: Users must provide their own storage at the upload destination.

## Accessories for MT1040A Dual-Module Configuration

## Method for Adding Measurement Modules

### Preparation 1: Version up the software for MT1040A

Install the latest software in the MT1040A.  
This software can be obtained from the Anritsu web site.

### Preparation 2: Remove the battery pack from Mainframe

- 1) Disconnect the AC cable.
- 2) Use screw driver or Coin and remove the battery lid from MT1040A.

- 3) Remove the battery pack.

### Preparation 3: Replacing the connected modules

- 1) Place the instrument on its front on a plain surface.  
Loosen the screws (shown by the blue circle) on rear side of the connected module.

- 2) After loosening the four screws, lift up the connected module with holding both sides.  
If you cannot lift up, loosen the four screws again.  
You can see the panel as below.

MT1040A Main Unit Back Panel

### Adding 1U module

- 1) Remove four screws of former module and replace to the next screws.  
Choose the bolts matching the added module. Use the B0740A for the 1U size module.

- 2) Align the module horizontally with the MT1040A as shown below.

- 3) Install the OTDR module in the correct MU10401xA/B slot as shown below.

Side View after Assembling Modules

Note: Align the four edges when installing the option; the module connector is easily damaged by misalignment.

- 4) Secure the module using the B0740A part chosen in step 1.  
After installing the module as shown in the figure on the right, check that there is no gap between the modules.

### After attaching the modules

- 1) After attaching the modules, connect the AC cable or install the battery packs.

- 2) Turn on the MT1040A.  
Please check whether a new module is recognized at the system information.

## Method for Adding Measurement Modules

### Adding Transport Module (MU10401xA)

- 1) Confirm that the MT1040A-020 option is installed in the MT1040A main unit.
- 2) Choose the bolts matching the added module.  
Use the B0741A for the MU10401xA module

- 3) Align the transport module horizontally with the MT1040A as shown below.

- 4) Install the transport module in the correct MT1040A slot as shown below.

Side View after Assembling Modules

Note: Align the four edges when installing the option; the module connector is easily damaged by misalignment.

- 5) Secure the module using the B0741A part chosen in step 2.  
After installing the module as shown in the figure on the right, check that there is no gap between the modules.

### After attaching the modules

- 1) Connect the G0419A standard accessory of the MT1040A-020 option to the MT1040A. The G0418A will not start. Additionally, battery operation is not possible when two transport modules are installed.
- 2) Turn on the MT1040A.  
Please check whether a new module is recognized at the system information.
